

## **Welcome to eShop!**

The eShop system is designed to support small and middle size sellers with reliable web-based shopping tool for all their needs. As e-commerce evolves, sellers and buyers are increasingly sophisticated and adventurous, demanding more choice. Consumers want the widest range of products and stores. Sellers need to obtain the easy and reliable software tool for their business. We proudly present the eShop system as such tool.

The eShop system is a software which when installed, provides full control over shopping services with minimum costs. You don't need to install additional software to work with a system. All what you need is only computer with internet connection - anywhere in the world.

**eShop**

Absolute control over your products  
at the tips of your fingers

## **1. eShop Introduction**

This document provides conceptual and reference information for users of eShop. The help documentation consists of a User's Guide and Reference section for each subsystem of eShop.

For more information on each of these sections, see the Roadmap to the eShop documentation.

In addition to the subsystems sections, this document contains an overview section.

This section contains the following topics that provide general information about eShop.

- What is eShop
- Roadmap to the eShop documentation
- System deployment
- Requirements
- Copyright and Legal Information

### **What is eShop**

The main objectives of eShop are:

- Provide effective Web-based sales management.
- Provide widening of markets by means of reliable, 24/7 technically supported effective sales management system.

### **Roadmap to eShop documentation**

This documentation contains two main sections: User's Guide, and a Reference section. The User's Guide introduces the basic functions of eShop, and provides conceptual and procedural information. The reference section provides detailed information about eShop subsystems, windows, and controls. The following is a brief description of the User's Guide sections.

### **Using "Products"**

This section provides information about the Products subsystem.

#### **The Products Tree**

This section introduces the Products Tree feature, which provides for suitability and presentation of the eShop products.

#### **Named Lists (or Named Nests)**

This section provides information about the Named Lists subsystem – the subsystem for creating and maintaining nests, or named lists.

#### **Discounts**

This section introduces the Discounts subsystem.

### **Link Types between Products**

This section provides information about the Link Types between Products subsystem.

### **Other Product Properties**

This section introduces the Order Properties subsystem. This section describes the creation and usage of eShop order properties.

### **Using “Orders”**

This section introduces the Orders subsystem. This section describes how to create and manage orders.

#### **Headline Order properties**

Main order properties in eShop system

#### **Additional Order Properties**

Additional order properties in eShop system

#### **Order Optional Charges**

Order optional charges and their properties in eShop system

#### **Order Statuses**

Order statuses and their properties in eShop system

#### **Order Item Properties**

Order items and their properties in eShop system

#### **Managing orders**

Orders management in eShop system

### **Using “Payments and Payment Methods”**

Payments management in eShop system

### **Using “Delivery and Delivery Types”**

Deliveries management in eShop system

### **Using “Dictionaries”**

Dictionary tables in eShop system

### **Using “Admin Functions”**

Administrative features in eShop system

### **Using “Reports – Products List”**

Generating Reports in eShop system

## Using “Database Function – Import Products List”

Importing data via Database function in eShop system

## Interface features

This section provides information about interface features of the eShop system

### The Products Tree

User can find any necessary products easier by means of The Products Tree – a key interface feature in the eShop system.

### Tables

User can use the same features to manage – sort, filter and view table data

### Sorting and Filtering

Sorting and filtering is easy, obvious and clear.

### Viewing of Table Data

Tables can be separated by several parts in a variety of means.

## System deployment

eShop can be deployed in two modes:

- **Private deployment.** User installs the system on his own server. Users reach the system through Internet or Intranet.
- **FOSS web server deployment.** User uses the eShop system, which is installed on server of FOSS Software Inc. Users reach the system through Internet.

## Requirements

Access is recommended using Microsoft Internet Explorer (version 5.0 or later) or Netscape Communicator (4.0 or later) or Mozilla FireFox 1.5 with a screen resolution of at least 1024 x 768

## Copyright and Legal Information

eShop system version: 1.1

## **2. eShop User's Guide**

### **2.1 Using "Products"**

All products in eShop's database are represented by their ID number, Part Number, Vendor, Name, Description, Category, Nest (Named List), Link to other product(s), Description, Status, Currency, Price, Rating, Quantity, Discount and New Price.

#### **2.1.1 The Products Tree**

Products in the eShop system are presented by categories. Such classification is very comfortable for representation purposes. Thus, you can edit, add or remove categories at your own decision to make the Products Tree clear and understandable. User can find a necessary product easier by means of The Products Tree.

#### **2.1.2 Named Lists (or Named Nests)**

User can create so-called Named Lists (or Nests) of products, where they can put hot items, most widely used items, special price items etc. This classification is also very comfortable for product management purposes. Users can create, edit and remove Nests from the eShop system. The user can put new products into existing nests and remove ones out of there.

#### **2.1.3 Discounts**

Every product usually has its own discount. There are different types of discounts in eShop system, and the user can easily create its own types of discounts. For example, discounts table implies the means for editing, creation or removing of any existing discount types.

#### **2.1.4 Link Types between Products**

All the products in eShop database may be linked to each other. These links can be of different types. Link types management - viewing, editing, adding and deleting link items - can easily be presented by means of the "Link Types between Products" table.

#### **2.1.5. Other Product properties**

Product properties also include such definitions as weight, unit, measure, currency, status and vendor of the product. All of these properties are stored in corresponding tables (or dictionaries), where user can add, edit or remove items by his own decision.

## **2.2. Using “Orders”**

Orders are the documents, which reflect interrelation between the owners of eShop system and their customers. Order has a headline part (appurtenant to the whole document) and an item (s) part, where one or more order items (products) are represented.

### **2.2.1 Headline Order Properties**

Every order has its own main headline properties or details – Order ID number, Order #, Date, Items Total, Charges Total, Status, Description, Base Currency, Customer First Name, Customer Last Name, Customer Street, Customer City, Customer State, Customer ZIP, Customer Country, Customer Email, Customer Phone, Referral Code, Note (-s).

Order ID number, Order Date, Items Total and Charges total are automatically generated or calculated in eShop system; all the other main properties are required to be filled by user.

### **2.2.2 Additional Order Properties**

Every order may have its own additional properties (headline document properties): Shipment type, Shipment time, Payment requirements, Expiration date etc. Any of these properties are accessible through “Order Properties” table and can easily be added, edited or removed by user.

Later these properties along with their values are accessible for user during order management. Values for these properties can be entered into the corresponding fields of any appropriate order.

### **2.2.3 Order Optional Charges**

Every order may have its own unique optional charges. These charges are stored in the corresponding table and can be easily created, edited or removed. Later these charges along with their values are accessible for user during order management. Values for these charges can be entered into the corresponding fields of any appropriate order.

### **2.2.4 Order Statuses**

There are two main order statuses – Active or Not Active, which affect the whole document. But a user can add, edit or remove items in the Order Statuses by request, for example – in stock, out of stock, waiting for delivery, reserved, suspended etc. Later, these statuses along with their values are accessible for user during order management. Values for these statuses can be entered into the corresponding fields of any appropriate order.

### **2.2.5 Order Item Properties**

Along with headline properties eShop system enables user to manage item properties. These properties can rely to any order string, or order item. For example, packaging type, quantity per pack, item notes etc. – all of these properties may be interpreted as order item properties, if they are not meant to spread to the whole document.

### **2.2.6 Managing orders**

The eShop system makes it very easy to manage orders. Users can view, edit, create or delete orders at the touch of a button. Any property value or any item value can be selected or entered into the corresponding field. A very useful and intuitive interface enables users to create a complex multi-item order in a few steps, which are clear and comprehensible.

## **2.3 Using “Payments and Payment Methods”**

Payments can be made electronically (PayPal, 2checkout.com, CyberSource are supported now) or manually (by receiving bank check). The eShop system developers understand that any specific user may want to widen this list of payment methods. As such, the eShop will guarantee adding any necessary payment system (method) to Payment Methods list.

Payment methods management means adding, editing or removing any item in the Payments Methods Table. Payments management means viewing any item in the Payments Table.

User-friendly interface, vivid and obvious presentation of payments favorably distinguishes eShop system from the similar software products. Another benefit of eShop system is high security of payment data channels, SSL connections to payment systems, reliable mechanism of data storage and many other features.

## **2.4 Using “Delivery and Delivery Types”**

Delivery Types and Deliveries management is easy and clear. A user can add, edit or remove any item(s) from the Delivery Types table, which consists of the following data fields: Delivery Name, Main URL, Delivery Confirmation URL.

Later these delivery types along with their values are accessible for the user during deliveries management. Values for these types can be entered into the corresponding fields of any appropriate delivery document.

Delivery document contains the following data fields: Confirmation Number, Delivery Type, Date, Actual Shipping Cost, Order ID, Order Number, Order Date. Any delivery document can be easily created, edited or removed.

## **2.5 Using “Dictionaries”**

The eShop system also contains specific data, which correlates to products in the system. Weights, Units, Measures, Currencies, Statuses, Vendors – all of

these dictionary tables store information, which can be easily added, edited or removed. All of these dictionaries, except Vendors dictionary, have only one field – Parameter Name. Vendors dictionary contains the following fields: Vendor Name, Vendor description, Vendor Picture, URL, Date of Record Creation.

## **2.6 Using “Admin Functions”**

The eShop system is organized with consideration of the user’s roles and access rights. As such, there are three items, which are accessible to only administrative persons. These items are Product Types, Discount Types and Order Optional Charges Types.

## **2.7 Using “Reports – Products List”**

Products list is the only one report, which is currently available. The eShop Team is planning to increase the report list in near term future.

## **2.8 Using “Database Function – Import Products List”**

Importing a product list is the only database function that is currently available. The eShop Team is planning to widen the Imports list in order to satisfy all customers needs.

## **2.9 Interface features**

### **2.9.1 Tables**

Many pages of the system contain tables, which are used for displaying lists of data. Every table has the same features, which you can use to sort, filter and view data. Each row in a table represents a set of fields named as record. Current record is a row in a table, where user is making his input - adding, editing or deleting some data, pressing buttons if these buttons are present.

### **2.9.2 Sorting and Filtering**

You can sort data in the table by clicking on the column’s title. You can also filter data by choosing Filter Data, below the column name. Click on the Filter icon to apply filtering.

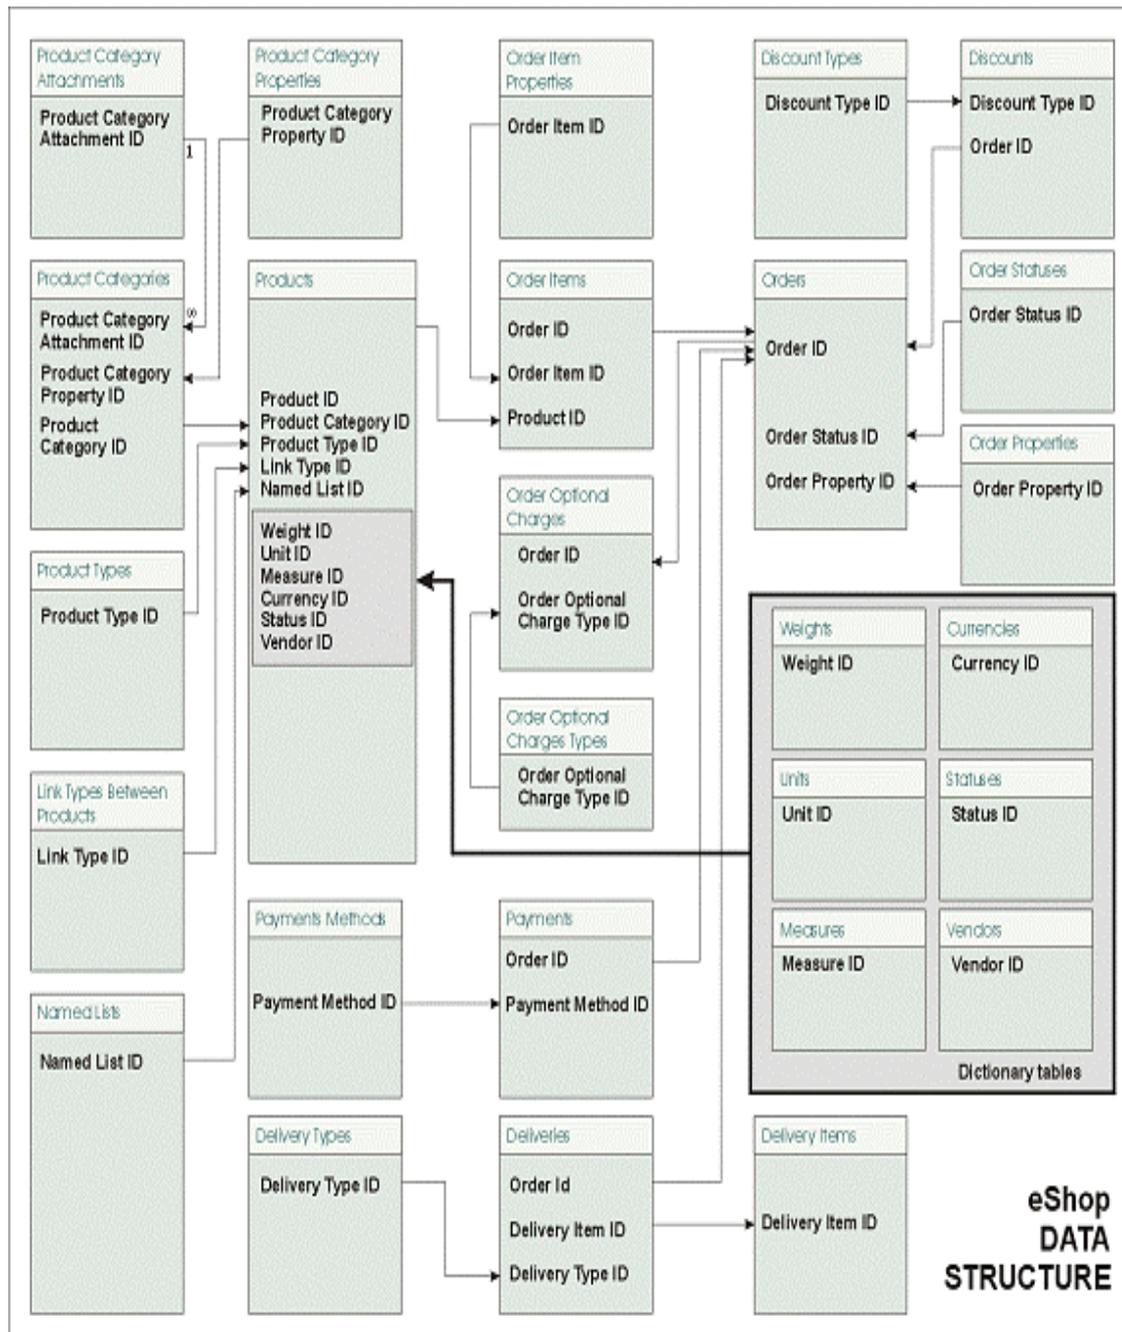

### **2.9.3 Viewing of Table Data**

The table can be separated into several parts, if number of rows if a table is very large. In these cases additional controls will appear. You can now see the number of parts below the table. You can view any table part by clicking the part number. You can also set the number of rows shown at one time in “Rows on

page” field. After entering this value press the APPLY button to affect the changes for the table presentations.

## 2.10 The eShop System Data Structure

The system data structure is shown on a figure below. Not all the fields are presented here, but only those, which have corresponding links one to another.

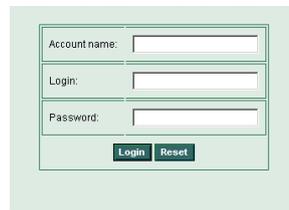

(Figure 1)

### 3. eShop Reference

#### 3.1 General interface

##### 3.1.1 Entering the system

The system entrance is situated on a server where the system is deployed. When using the FOSS web server deployment method of using eShop, the URL of system entrance is <http://www.w3spt.com/eshop>. In the case of private deployment, the system entrance is on your internet server configured page. The system entrance page is used to login to the eShop system. Specifying the company account, user's login and password enables entrance into the eShop system, as shown in Figure 2.

The image shows a login form with a light green background. It has three text input fields stacked vertically. The first is labeled 'Account name:', the second 'Login:', and the third 'Password:'. Below these fields are two buttons: 'Login' and 'Reset', both with a dark green background and white text.

(Figure 2)

#### Fields

##### **Account name**

The name of eShop account.

##### **Login**

The user's login name.

##### **Password**

The user's login password.

#### Buttons

##### **Login**

Press this button after filling in all login fields in order to login into the system. The security subsystem will check your credentials. If authorization fails, you will see the error message.

##### **Reset**

Reset s the page of all previous input.

##### 3.1.2 The Main Page

The system Main Page is used for performing common tasks such as product (s) selection and navigating through the different categories and products. The System Main Page is shown in Figure 3.

Products   Orders   Payments   Delivery   Manage Dictionaries   Admin   Reports   Database Function   Log off   Feedback

(Figure 3)

## Products Tree

The Products tree is shown in the left part of a screen. If a category contains child categories, the box near category name has a plus (+) sign inside it. You can choose to expand or collapse the parent category by clicking the “+” button in the corresponding category box. Clicking on the category name will result displaying the entire list of products included in this category. This list is displayed in the middle of the Main Page screen in the Products table.

## Fields and tables

### Products table

The Products table shows a list of products available in the selected category. Sorting of this table by any field (e.g. a column) is accomplished by means of clicking on the corresponding field name. The Products table consists of the following fields: Part Number, Vendor Name, Status, Currency, Price, Picture, Rating, Quantity, Discount and New Price.

## Buttons

### New Category

Use this button to create a new category

### New Product

Use this button to enter a new product

### **Edit Mode**

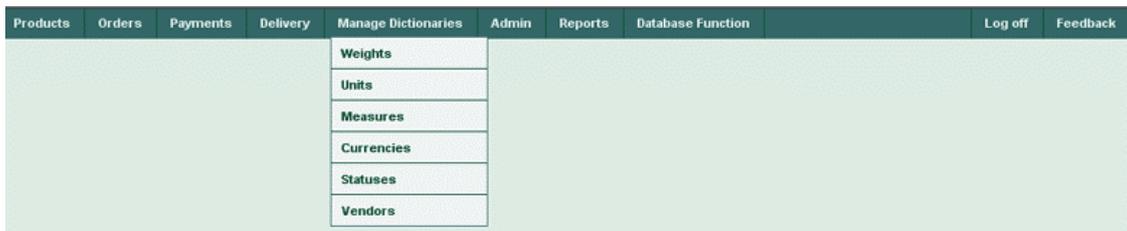

Use this button to switch into the Edit mode.

### **Search**

Use this button to initiate searching between products.

## **System Menu**

The **System Menu** is visible on every page in the eShop system. Navigation through the eShop system can easily be made utilizing the **System Menu**, shown in Figure 4.

(Figure 4)

## **Navigation**

All functional aspects of the eShop system are available through the **System Menu**. The system generates the menu structure dynamically depending on the user's permissions. The following list displays the main **System Menu** structure and contains a brief description for each item:

- Products**
- Orders**
- Payments**
- Delivery**
- Manage Dictionaries**
- Admin**
- Reports**
- Database Function**
- Log off**
- Feedback**

### **3.1.2.1 System Menu items**

The following is a brief description of all System Menu items:

#### **Products**

This menu is used to return to the Main page of eShop system, where the Products tree and the Products table are situated.

**Manage products**

This menu item is used for products management. E.g. Viewing, editing, adding and removing items in the “Products” table.

**Products Search**

Here the user can input search parameters and search for necessary products in the eShop database.

**Named Lists**

This menu item is used for Named List management. E.g. Viewing, editing, adding and removing items in the Named Lists (or so-called Nests) table.

**Discounts**

This menu item is used for the Discounts Table management. E.g. Viewing, editing, adding and removing items in the “Discounts” table.

**Link Types Between Products**

All the products in the eShop database may be linked together.

These links can have different types. “Link Types Between Products” menu item is used for link types between products management – viewing, editing, adding and deleting items in the “Link Types Between Products” table.

**Orders**

This menu contains functions, which are implied to orders, their statuses, properties, properties of order items, optional charges. You can manage your orders using the “Manage Orders” item of menu “Orders”.

**Order Statuses**

Orders in the eShop database can have different statuses. This menu item is used for management – viewing, editing, adding and deleting items in the “Order Statuses” table.

**Order Properties**

Orders in the eShop database can have different properties. This menu item is used for management – viewing, editing, adding and deleting items in the “Order Properties” table.

**Order Item Properties**

Order Items in the eShop database can have different properties. This menu item is used for management –

viewing, editing, adding and deleting items in the “Order Item Properties” table.

#### **Order Optional Charges**

Orders in the eShop database can have different optional charges. This menu item is used for management – viewing, editing, adding and deleting items in the “Order Optional Charges” table.

#### **Manage Orders**

This menu item is used for management – viewing, editing, adding and deleting items in the “Orders” table.

### **Payments**

This menu is used to set up payment methods and to see all of the payments made by customers.

#### **Payment Methods**

All the payments in eShop system may be done using different methods, in conjunction with different online payment systems. This menu item is used for management – viewing, editing, adding and deleting items in the “Payment Methods” table.

#### **Payments**

This menu item is used for viewing items in the “Payments” table.

### **Delivery**

This menu can be used to setup delivery types, available in your system, and to see statuses of all of the deliveries of your products to your customers.

#### **Delivery Types**

This menu item is used for management – viewing, editing, adding and deleting items in the “Delivery Types” table.

#### **Delivery**

This menu item is used for management – viewing, editing, adding and deleting items in the “Deliveries” table.

### **Manage Dictionaries**

Use this menu for accessing to any of the special system dictionaries, such as Weights, Units, Measures, Currencies, Statuses and Vendors.

**Weights**

This menu item is used for management – viewing, editing, adding and deleting items in the “Weights” table.

**Units**

This menu item is used for management – viewing, editing, adding and deleting items in the “Units” table.

**Measures**

This menu item is used for management – viewing, editing, adding and deleting items in the “Measures” table.

**Currencies**

This menu item is used for management – viewing, editing, adding and deleting items in the “Currencies” table.

**Statuses**

This menu item is used for management – viewing, editing, adding and deleting items in the “Statuses” table.

**Vendors**

This menu item is used for management – viewing, editing, adding and deleting items in the “Vendors” table.

**Admin**

This menu consists of three menu items: Product Types, Discount Types and Order Optional Charges Types. All items in this menu are read-only and require administrative rights to full access.

**Product Types**

Use this menu item to view the “Product Types” table.

**Discount Types**

Use this menu item to view the “Discount Types” table.

**Order Optional Charges Types**

Use this menu item to view the “Order Optional Charges” table.

**Reports**

This menu consists of Products List menu item.

**Products List**

Use this menu item to generate your product list report.

### Database Function

Use this menu to import your product lists into the eShop system.

### Log off

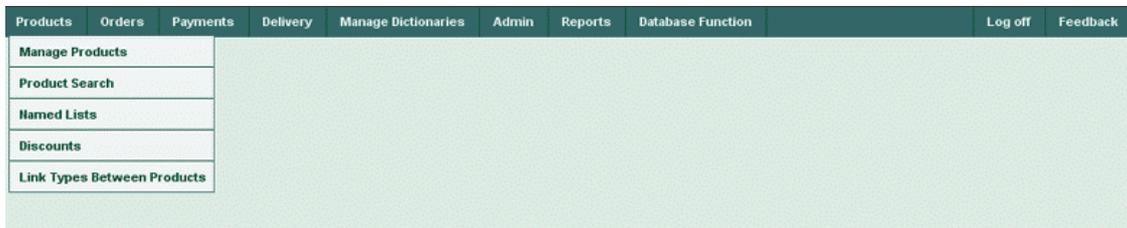

Use this menu to logout from the eShop system.

### Feedback

Use this menu if you need to send feedback to the developers of the eShop system.

## 3.2 Products Menu

The Products Menu is shown in Figure 5.

(Figure 5)

The Products Menu consists of 5 menu items: Manage Products, Product Search, Named Lists (Nests), Discounts and Link Types Between Products.

### 3.2.1 “Manage Products” page

Use this page for viewing, editing, adding and deleting items in the Products table. Access to **Product Categories** page is from this page. You can organize your products tree by adding products to their respective categories. **Manage Products** page is shown in Figure 6.

Products													Orders	Payments	Delivery	Manage Dictionaries	Admin	Reports	Database Function	Log off	Feedback

Press the button in this column to edit current product

### **Delete**

Press the button in this column to delete current product

## **Drop-down lists**

### **Search**

Select the search criteria here (by Part Number, Product Name or Product Description)

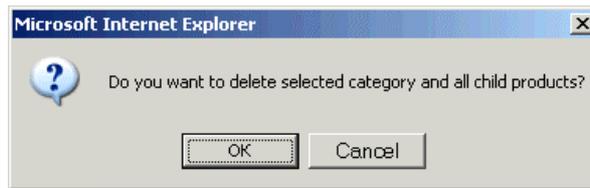

## **Buttons**

### **Edit Category**

Press this button to open **Edit Category** (3.2.1.4) screen, where you can edit current product category.

### **Delete Category**

Press the button in this column to delete current product category. When you press **Delete** button, you will be prompted for a confirmation (3.2.1.6):

(Figure 7)

### **New Category**

Press this button to open **New Product Category** (3.2.1.1) page, where you can enter a new product category.

### **New Product**

Press this button to open a **New Product** (3.2.1.2) page, where you can enter a new product into the eShop system.

### **Search**

Select the search criteria in the drop-down list (by Part Number, Product Name or Product Description); input a search phrase into the search field and press **Search** button. It will activate the search through the table.

### **Edit Mode**

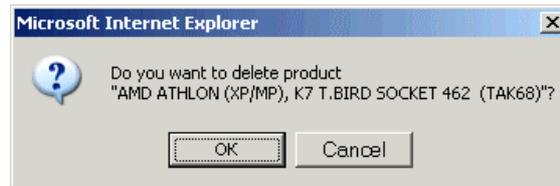

Switches to edit mode (3.2.1.3).

### **Edit**

Press this button to edit current product.

### **Delete**

Press the button in this column to delete current product. When you press **Delete** button, you will be prompted for a confirmation as shown on Figure 8:

(Figure 8)

### 3.2.1.1 "New Product Category" page

The addition of a new product category is performed here. The screen will look like Figure 9:

A screenshot of a web application interface for adding a new product category. At the top is a navigation menu with items: Products, Orders, Payments, Delivery, Manage Dictionaries, Admin, Reports, Database Function, Log off, and Feedback. Below the menu, the page title is "Parent category is 'AMD COOLING FAN'". There is a "Product List" button in the top right. The main form contains several fields: "Parent Category:" with a dropdown menu showing "AMD COOLING FAN"; "Category Name:" with an empty text input; "Status Name:" with a dropdown menu showing "In Stock"; "Description:" with an empty text input; "Picture File Name:" with an empty text input and a "Browse..." button; and "Is Posted:" with an unchecked checkbox. At the bottom right of the form are three buttons: "Reset", "Save", and "Save & Close". In the bottom right corner of the page, it says "eShop version:1.1".

(Figure 9)

Here you can choose the name of parent category (**Parent Category** drop-down list), input the name of category (**Category Name** field), choose the status name of category (**Status Name** field), description (**Description** field), visibility (**Is posted** checkbox). The picture file name (if one exists) will be inserted into **Picture File Name** field after browsing and selecting it among your drives, folders and files (**Browse...** button). Also the following buttons are available: **Products list** (for opening the "Products List" page, **Reset** (cancel your input), **Save** (save your input), **Save & Close** (save your input and close this page). Note if you need to make the current category root category, you have to choose "All Categories" in the **Parent Category** drop-down list.

#### Fields

##### **Category Name**

Input category name

##### **Description**

Input category description

##### **Picture File Name**

Press the Browse... button and select the picture file name. It will be placed into this field.

### **Drop-down lists**

#### **Parent Category**

Select the category, which you intend to assign as parent category for the current one.

#### **Status Name**

Select the status name for current product category.

### **Check boxes**

#### **Is Posted**

Check this box to apply status (visibility) of category for buyers.

### **Buttons**

#### **Product list**

Press this button to open the "Product List" page.

#### **Browse...**

Press this button near picture file field to browse for a picture file.

#### **Reset**

Press this button to cancel your input (not saving changes).

#### **Save**

Press this button to save your changes.

#### **Save and Close**

Press this button to save your changes and leave "New Product Category" page.

### **3.2.1.2 "New Product" page**

New products can be entered here.

The New Products screen is shown in Figure 10:

Products	Orders	Payments	Delivery	Manage Dictionaries	Admin	Reports	Database Function	Log off	Feedback
Parent category is "AMD COOLING FAN"									
<a href="#">Product List</a>									
Parent Category:	AMD COOLING FAN

eShop version:1.1

(Figure 22)

## Named Lists Table Columns

### ID

Current named list ID number.

### Nest Type Name

Current named list name (nest type name.) This name has the reference to the corresponding nest, where a set of products is stored. You can click on the nest type name and the screen will show the selected nest. (3.2.3.1)

### Edit

Press the button in this column to edit current named list

### Delete

Press the button in this column to delete current named list

## Buttons

### New Nest Type

Press this button to add a new nest type in a new screen that will open.

### Edit

Press this button to edit the current named list.

### Delete

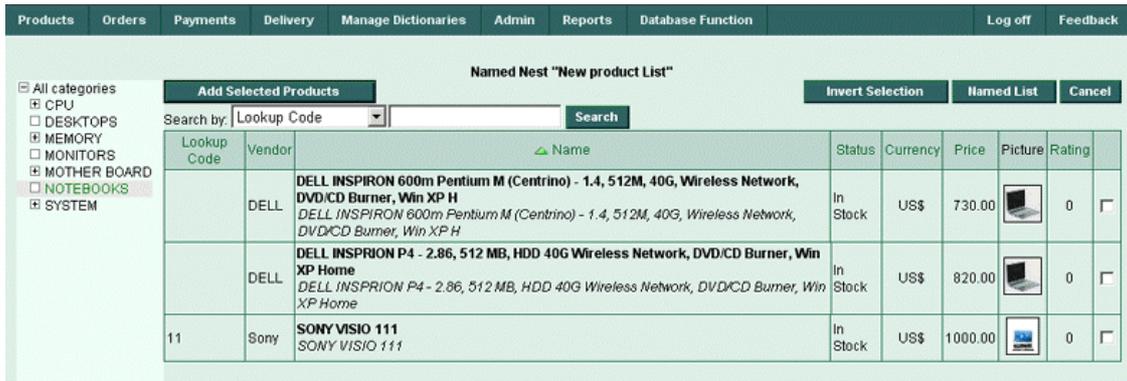

Press this button to delete the current named list. When you press the **Delete** button, you will be prompted for a confirmation:

(Figure 23)

### 3.2.3.1 “Viewing Current Nest Type” page

Here you can view the products included in the selected named list. The data in the table can be sorted by clicking the title of any column. Unnecessary items can be removed by clicking the **Remove** button. Additionally, opening the parental screen by clicking the **Named List** button or add additional new products by clicking the **Add Product** button.

(Figure 24)

### 3.2.3.2 “Creating New Nest Type” page

Adding products for the selected named list is performed on this screen. The products tree is shown in the left side panel of the screen, and the appropriate product(s) can be chosen by clicking the (+) boxes and expanding or collapsing tree branches. Products table in the middle of a screen will represent the chosen products for a current Named Nest. The data in the table can be sorted by clicking the title of any column. You can open the parental screen (**Named List** button), invert your selection (**Invert Selection** button) or cancel your choice (**Cancel** button). Also you can input your search criteria in the **Search by** drop-down list (by Lookup Code, Product Name or Product Description), input your parameters into the **Search** field and initiate searching between products by pressing the **Search** button.

### Cancel

Press this button to cancel any entries.

## 3.3 Orders Menu

All order menu options are presented here. Viewing, editing, adding and removing order documents, adding products to orders, setting up order statuses, order properties, order item properties and order optional charges can be accomplished using this menu.

- Order Statuses
- Order Properties
- Order Item Properties
- Order Optional Charges
- Manage Orders

(Figure 32)

### 3.3.1 “Order Statuses” page

Use this page to view the status of orders in the eShop system.

(Figure 33)

#### Order Statuses Table Columns

##### Name

Order status name.

##### Description

Represents order status description.

##### Up

Press the button in this column to move current order status up.

##### Down

Press the button in this column to move current order status down.

##### Edit

Press the button in this column to edit current order status.

##### Delete

Press the button in this column to delete current order status.

#### Buttons

##### New Status

Press this button to create new order status.

##### Up

Press the button in this column to move current order status up.

##### Down

Press the button in this column to move current order status down.

##### Edit

Press the button in this column to edit current order status.

##### Delete

Press this button to delete current order status.

When you press **Delete** button, you will be prompted for a confirmation:

(Figure 34)

### 3.3.1.1 “New Order Status” page

Use this page to create new order status. Entering a status name and description into the table is accomplished here.

(Figure 35)

#### Fields and Columns in Order Statuses Table

##### **Name**

Put the order status name.

##### **Description**

Put the order status description.

##### **Up**

Press the button in this column to move current order status up.

##### **Down**

Press the button in this column to move current order status down.

##### **Update**

Press the button in this column to update current new order status.

##### **Cancel**

Press the button in this column to cancel the entries for the current new order status.

##### **Edit**

Press the button in this column to edit current order status.

##### **Delete**

Press the button in this column to delete the current order status.

## Buttons

### New Status

Press this button to create new order status.

### Up

Press the button in this column to move current order status up.

### Down

Press the button in this column to move current order status down.

### Edit

Press the button in this column to edit current order status.

### Delete

Press this button to delete current order status.

When you press **Delete** button, you will be prompted for a confirmation:

(Figure 36)

### Update

Press the button in this column to update current new order status.

### Cancel

Press the button in this column to cancel any entered data for current new order status.

## 3.3.2 “Order Properties” page

Use this page to view, edit, add or delete order properties.

(Figure 37)

## Order Properties Table Columns

### ID

Order property ID.

**Name**

Order property name.

**Edit**

Press the button in this column to edit current order property.

**Delete**

Press the button in this column to delete current order property.

**Buttons**

**New Property**

Press this button to create new order property.

**Edit**

Press the button in this column to edit current order property.

**Delete**

Press this button to delete current order property.  
When you press "Delete" button, you will be prompted for a confirmation:

(Figure 38)

**3.3.2.1 "New Order Property" page**

Put the new order property name and description here.

(Figure 39)

**Fields and Columns in Order Properties Table**

**ID**

Order property ID is automatically stored here.

**Name**

Put the order property name here.

**Update**

Press the button in this column to update current new order property.

**Cancel**

Press the button in this column to cancel your input for current new order property.

**Edit**

Press the button in this column to edit current order property.

**Delete**

Press the button in this column to delete current order property.

**Buttons**

**New Property**

Press this button to create new order property.

**Edit**

Press the button in this column to edit current order property.

**Delete**

Press the button in this column to delete current order property.

**Update**

Press the button in this column to update current new order property.

**Cancel**

Press the button in this column to cancel your input for current new order property.

### 3.3.3 “Order Item Properties” page

Use this page to view, edit, add or delete order item properties.

(Figure 40)

#### Order Item Properties Table Columns

**Name**

Order item property's name.

**Edit**

Press the button in this column to edit current order item property.

**Delete**

Press the button in this column to delete current order item property.

**Buttons****New Property**

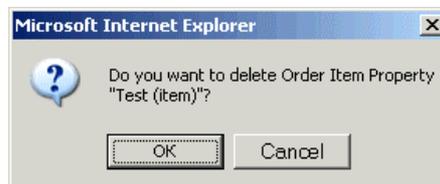

Press this button to create new order item property.

**Edit**

Press the button in this column to edit current order item property.

**Delete**

Press this button to delete current order item property. When you press “Delete” button, you will be prompted for a confirmation:

(Figure 41)

**3.3.3.1 “New Order Item Property” page**

**Fields and Columns in Order Item Properties Table****Name**

Put the order item property name here.

**Update**

Press the button in this column to update current new order item property.

**Cancel**

Press the button in this column to cancel your input for current new order item property.

**Edit**

Press the button in this column to edit current order item property.

**Delete**

Press the button in this column to delete current order item property.

**Buttons**

**New Property**

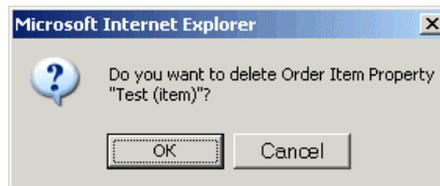

Press this button to create new order item property.

**Edit**

Press the button in this column to edit current order item property.

**Delete**

Press this button to delete current order item property. When you press “Delete” button, you will be prompted for a confirmation:

(Figure 43)

**Update**

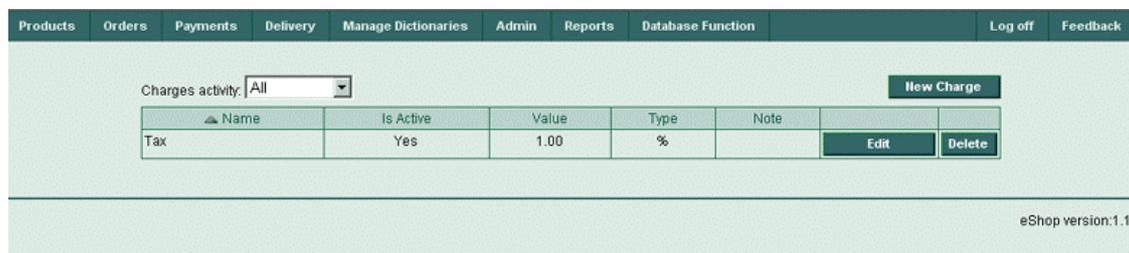

Press the button in this column to update current new order item property.

**Cancel**

Press the button in this column to cancel your input for current new order item property.

### 3.3.4 “Order Optional Charges” page

Use this page to view, edit, add or delete order optional charges.

(Figure 44)

### Order Optional Charges Table Columns

**Name**

An order's optional charge name.

**Is Active**

An order's optional charge status.

**Value**

An order's optional charge absolute value.

**Type**

An order's optional charge type.

**Note**

Any user notes to the order optional charge.

**Edit**

Press the button in this column to edit current order optional charge.

**Delete**

Press the button in this column to delete current order optional charge.

**Buttons**

**New Charge**

Press this button to create new order optional charge.

**Edit**

Press the button in this column to edit current order optional charge.

**Delete**

Press this button to delete current order optional charge. When you press **Delete** button, you will be prompted for a confirmation:

(Figure 45)

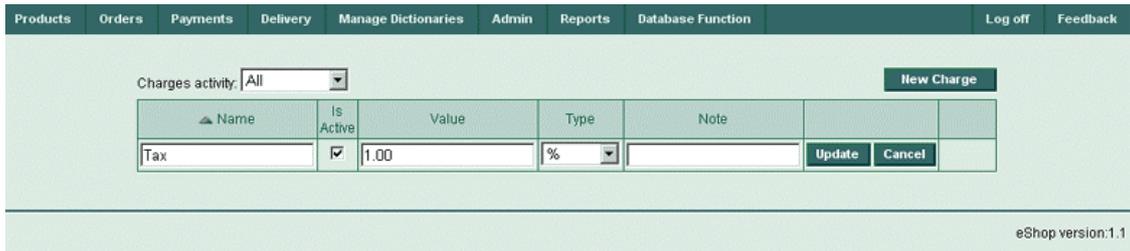

**Drop-down lists**

**Charges Activity**

Select All, Active Only or Inactive Only for filtering order optional charges according to your selection.

**3.3.4.1 "New Order Optional Charge" page**

This page is used for editing and creation of new order optional charges.

(Figure 46)

## Fields and Columns in Order Optional Charges Table

### Name

Put the order optional charge name.

### Is Active (checkbox)

Check this box to make order optional charge active.

### Value

Put the order optional charge value.

### Type (drop-down list)

Select the type of the order optional charge.

### Note

Put any notes to the order optional charge.

### Update

Press the button in this column to update current new order optional charge.

### Cancel

Press the button in this column to cancel your input for current new order optional charge.

## Drop-down lists

### Charges activity

Select the desired value to filter records in Order Optional Charges Table (All, Active Only, or Inactive Only).

### Type

Select current new order optional charge's type.

## Check Boxes

### Is Active

Check this box to make current order optional charge active.

## Buttons

### New Charge

Press this button to create new order optional charge.

### Update

Press the button in this column to update the new order optional charge.

### Cancel

Press the button in this column to cancel your input for the new order optional charge.

### 3.3.5 “Manage Orders” page

Use this page to view, edit, add or delete orders. The Orders Table shows the entire list of all orders. Order details can be viewed by clicking the order ID reference number.

Products   Orders   Payments   Delivery   Manage Dictionaries   Admin   Reports   Database Function   Log off   Feedback									
								<a href="#">New Order</a>	
ID	Order #	Date	Items Total	Charges Total	Shipping Total	Total	Order Status	Edit	Delete

eShop version:1.1

(Figure 47)

#### Orders Table Columns

##### ID

Order ID. Clicking the reference number in this field will expand or collapse current order details.

##### Order #

Order number.

##### Date

Order date.

##### Items Total

Order total number of items.

##### Charges Total

Order total amount of charges.

##### Shipping Total

Order total amount of shipping charges.

##### Total

Order total.

##### Order Status

Order status (Active or Inactive).

##### Edit

Press the button in this column to edit current order.

##### Delete

Press this button to delete current order.

When you press **Delete** button, you will be prompted for a confirmation:

#### Buttons

### New Order

Press this button to create new order.

### Edit

Press the button in this column to edit current order.

### Delete

Press the button in this column to delete current order.

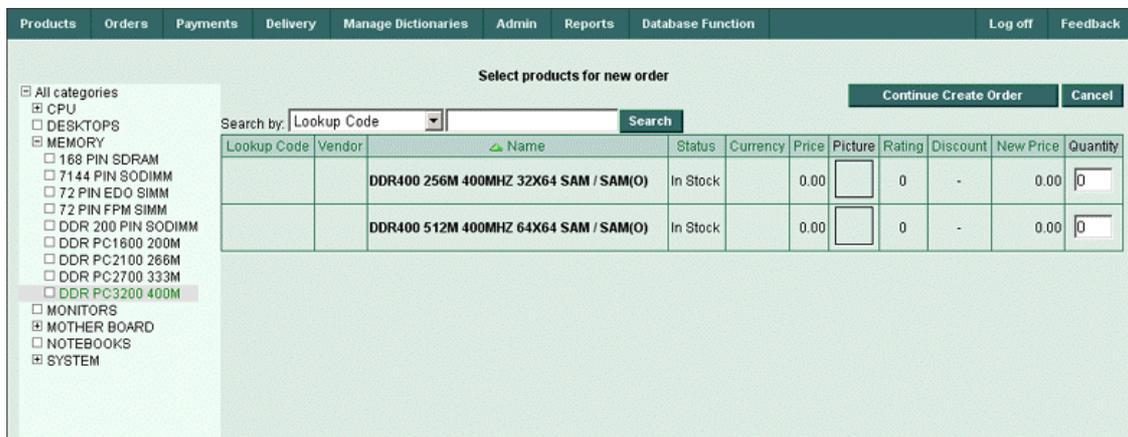

(Figure 48)

### 3.3.5.1 “Create New Order page” – step 1

Creating new orders requires three steps.

Step 1. Select products for new order.

The first step is similar to organizing of a new Products Nest. Choose the necessary products (order items), either by means of a products tree, or with the help of a search.

(Figure 49)

### New Order Items Table Columns (step 1)

#### Lookup Code

Product lookup code in the order item.

#### Vendor

Product vendor in the order item.

#### Name

Product name in the order item.

**Status**

Product status in the order item.

**Currency**

Product currency in the order item.

**Price**

Product price in the order item.

**Picture**

Product picture.

**Rating**

Product rating.

**Discount**

Product discount (if available).

**New Price**

Product new price.

**Quantity**

Product quantity.

**Fields****Quantity**

Input product quantity.

**Search**

Input your search string here.

**Buttons****Continue Create Order**

Press this button to continue create order (go to step 2).

**Cancel**

Press this button if you want to cancel your input.

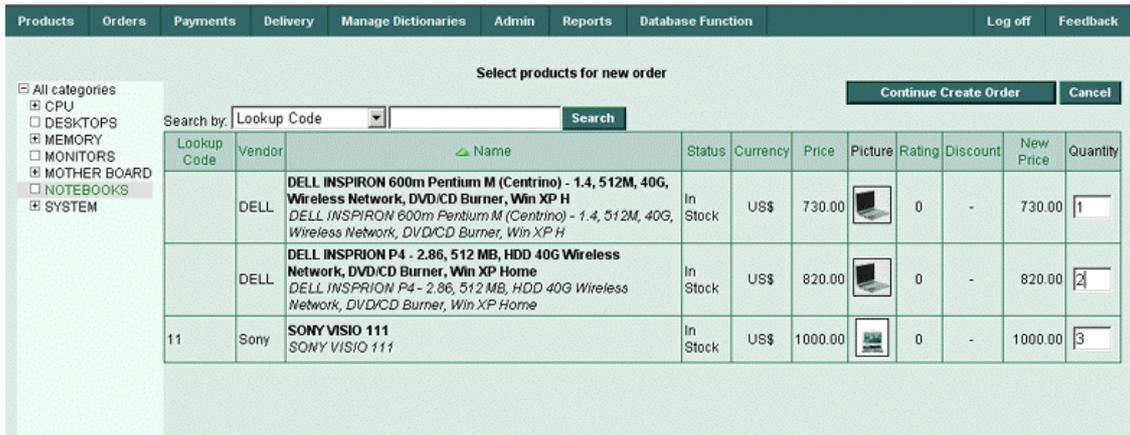

**Search**

Input the search phrase into the search field, select the search criteria using drop-down list and press this button. It will activate the search through the products list

**Drop-down lists****Search**

Select the search criteria here (by Lookup Code, Product Name or Product Description)

After adding some products to the order, the screen will look similar this:

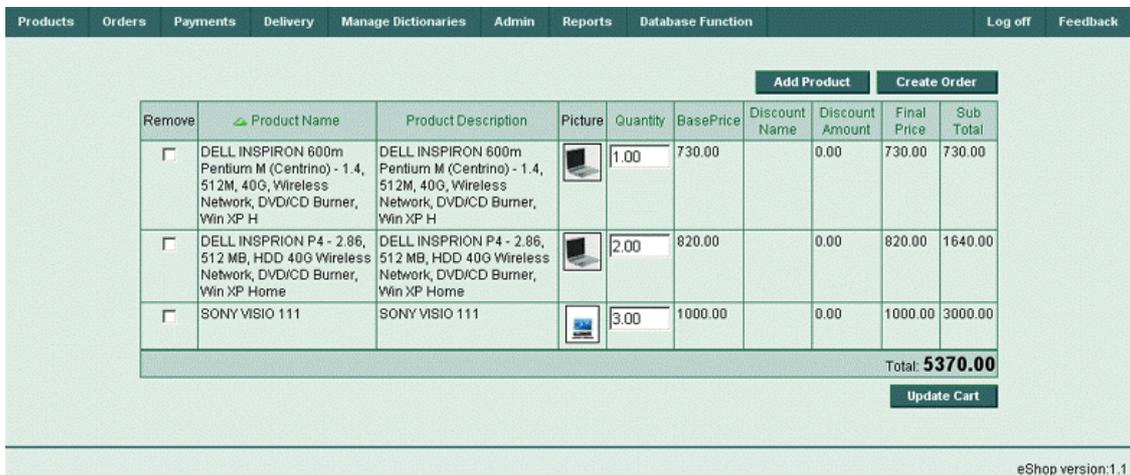

(Figure 50)

When you finish adding products, press the button, **Continue Create Order**.

### 3.3.5.2 “Continue Create Order” page – step 2

Step 2. Edit order items.

Now the orders cart is created, it is time to add and work with the order items themselves. Here can be seen the order items, entered during the first step, and allow the ability to continue working upon your order cart.

(Figure 51)

### New Order Items Table Columns (step 2)

#### **Remove (checkbox)**

Check this box to remove an order item.

#### **Product Name**

Product name.

#### **Product Description**

Product description.

**Picture**

Product picture.

**Quantity**

Product quantity.

**BasePrice**

Product base price.

**Discount Name**

Discount name.

**Discount Amount**

Discount amount.

**Final Price**

Product final price.

**Sub Total**

Product subtotal.

**Fields**

**Quantity**

Input new product quantities in the order Item.

**Buttons**

**Add Product**

Press the button in to add new products, which were missed during step 1. This will automatically return to the previous step without destroying the order's cart.

**Create Order**

Press this button to continue create order (go to step 3).

**Update Cart**

Press this button to update the order's cart after making some adding or removing products or editing quantities.

When the "Remove" checkbox is checked, the screen should look like this:

Remove	Product Name	Product Description	Picture	Quantity	BasePrice	Discount Name	Discount Amount	Final Price	Sub Total

## Continue Create Order – Fields

### General Information:

#### Order #

Input an order number (#) here.

#### Order Date

Input the order date here or click the **Select Date** reference to open the calendar form (3.12).

#### Order Status

Set an order status.

#### Status Description

Displays order status description.

#### Base Currency

Set order base currency.

#### Items Total

Displays items total.

#### Charges Total

Displays charges total.

#### Shipping Total

Enter shipping total if required.

### Customer Information:

**Customer First Name**

Enter customer's first name.

**Customer Last Name**

Enter customer's last name.

**Customer Street**

Enter customer's street.

**Customer City**

Enter customer's city.

**Customer State**

Enter customer's state.

**Customer ZIP**

Enter customer's zip code.

**Customer Country**

Enter customer's country.

**Customer E-Mail**

Enter customer's phone e-mail address (-es).

**Customer Phone**

Enter customer's phone number (-s).

**Customer Referral Code**

Enter customer's referral code.

***Other Information:*****Note**

Enter additional notes, if required

**Order Items**

View the order items in table form

**Buttons****Order List**

Press this button to switch to the **Order List** page. The order list will be displayed with the current order expanded. (it can be collapse to continue navigation)

**Reset**

Press this button to cancel any entered data and reset data for the current page.

The order has now been created. Switching to an Order List by pressing the **Order List** button.

**3.3.5.4 "Order List" page**

Expand or collapse any order by clicking the **Order ID** reference number. Any order can be edited or deleted by clicking the buttons **Edit**, **Delete**. A new order can be created by clicking the **New Order** button. Add items to any opened order

by pressing the **Add Items** button. Edit or delete any opened order items by pressing the buttons **Edit**, **Delete**, and add charges by pressing the **Add Charge** button.

This page displays the orders list, only one of them may be opened – i.e. expanded to represent all the order’s data, including order items, charges details, properties details, customer details etc.

(Figure 55)

**Opened (Expanded) Order List – All Controls (Fields and Buttons)**

**Order Header:**

**New Order (button)**

Opens **Create New Order** page – step 1 (3.3.5.1).

**ID**

Displays order ID.

**Order #**

Displays order number (#).

**Date**

Display order's date.

**Items Total**

Displays items total.

**Charges Total**

Displays charges total.

**Shipping Total**

Displays shipping total if was entered.

**Total**

Displays order total.

**Order Status**

Displays order status (Active or Inactive).

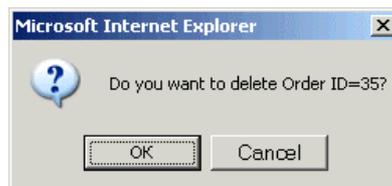

**Edit**

Press this button for switching to Edit mode of current order.

**Delete**

Press this button to delete the current order.

When you press the **Delete** button, you will be prompted for a confirmation:

(Figure 56)

***Order Detail window:*****Status Description**

Displays status description (Active Orders / Inactive Orders).

**Base Currency**

Displays base currency of the order.

**Customer First Name**

Displays customer's first name.

**Customer Last Name**

Displays customer's last name.

**Customer Street**

Displays customer's street.

**Customer City**

Displays customer's city.

**Customer State**

Displays customer's state.

**Customer ZIP**

Displays customer's ZIP code.

**Customer Country**

Displays customer's country.

**Customer E-Mail**

Displays customer's phone e-mail address (-es).

**Customer Phone**

Displays customer's phone number (-s).

**Customer Referral Code**

Displays customer's referral code.

**Note**

Displays notes if were entered

**Other Items Window:****Product Name**

Product name in the order item.

**Quantity**

Product's quantity.

**BasePrice**

Product's base price.

**Discount Name**

Discount name (if exists).

**Discount Amount**

Discount amount (if available).

**Final Price**

Product final price.

**Total**

Product total price.

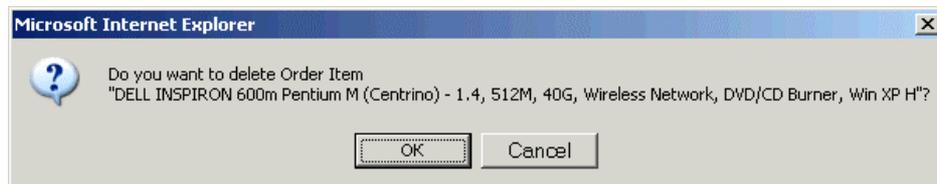

**Edit**

Press the button in this column to switch into Edit mode for the current order item.

**Delete**

Press this button to delete the current order item.

When you press **Delete** button, you will be prompted for a confirmation:

(Figure 57)

**Other Properties Window:****Property Name**

Displays property name.

**Property Value**

Displays property value.

**3.4 Payments Menu**

Methods of payments can be setup for the eShop system and easily review all payments made by customers.

**3.4.1 “Payment Methods” page**

Use this page to view the available payment methods for your customers, which are currently available in the eShop system.

Methods	Description
<a href="#">2Checkout</a>	Receive payments through 2Checkout online service ( <a href="http://www.2checkout.com">http://www.2checkout.com</a> )
<a href="#">Check</a>	Receive bank check.
<a href="#">CyberSource</a>	Receive payments through CyberSource online service ( <a href="http://www.cybersource.com">http://www.cybersource.com</a> )
<a href="#">PayPal</a>	Receive payments through PayPal online service ( <a href="http://www.paypal.com">http://www.paypal.com</a> )

eShop version:1.1

(Figure 58)

**Payment Methods Table Columns****Methods**

Brief name of payment method and contains a reference to the method. Clicking the reference with the payment method will open the **View Payment Method** page (3.4.1.2).

**Description**

Description of the payment method, also contains a hyperlink to the URL which supports this method.

### 3.4.1.1 “View Payment Method” page

Currently the eShop system supports three payment methods: CyberSource, PayPal and 2CheckOut. See the examples below for these payment methods use and data.

An example of CyberSource payment method:

Name	Description	Value
merchantID	<b>[Required]</b> Your CyberSource merchant ID.	v6968008
PrivateKey	<b>[Required]</b> PrivateKey	MIICdGIBADANBgkqhkiG9w0BAQEFAASCAl8wggJbAgEAAoGBAKD6MNeO4Sb2LKqTqbL4f0ceCGttOXqZkJFzshCe73ABF4Kyd/GHe9xLOJEJCU3MF8Bt
PublicKey	<b>[Required]</b> PublicKey	MIGMA0GCSqGSIb3DQEBAQUAA4GNADCBiQKgQCg+JDxDneEm9iyqk6my+CNHHghrbTl6mcSRc7blQnu9wAReCsnfh3vcSzoXCQINzB/AW2hUa0HP

eShop version:1.1

(Figure 59)

### View Payment Method Table Columns

#### Name

Name of data - merchant ID or public key is stored here

#### Description

The payment method merchant ID or public key description is stored here. This is a required field.

#### Value

Numeric value of merchant ID or binary value of public key is stored here

#### Edit (Button)

You can edit any current table data using the **Edit** button in the corresponding record.

### Buttons

#### Edit

You can edit any current table data using the **Edit** button in the corresponding string.

Another example using the 2CheckOut payment method:

Products Orders Payments Delivery Manage Dictionaries Admin Reports Database Function Log off Feedback

**Payment method - 2Checkout**

**Payment Methods**

Name	Description	Value	
sid	<b>[Required]</b> Your 2Checkout.com account number		<a href="#">Edit</a>

eShop version:1.1

(Figure 60)

The PayPal payment method example:

Products Orders Payments Delivery Manage Dictionaries Admin Reports Database Function Log off Feedback

**Payment method - PayPal**

**Payment Methods**

Name	Description	Value	
business	<b>[Required]</b> This is your PayPal ID, or email address, where payments will be sent. This email address must be confirmed and linked to your Verified Business or Premier account.		<a href="#">Edit</a>
cancel_return	An internet URL where the user will be returned if payment is canceled. For example, a URL on your site which hosts a "Payment Canceled" page. This item is optional, if omitted, users will be taken to the PayPal site.		<a href="#">Edit</a>
currency_code	The currency of the payment. Defines the currency in which the monetary variables are denoted. Possible values are "USD" (U.S. Dollar), "EUR" (Euro), "GBP" (Pound Sterling), "CAD" (Canadian Dollar), "JPY" (Yen). If omitted, all monetary fields will be interpreted as U.S. Dollars.		<a href="#">Edit</a>
image_url	The internet URL of the 150 by 50 pixel image you would like to use as your logo. This is optional: if omitted, your customer will see your Business Name (if you have a Business account) or email address (if you have a Premier account).		<a href="#">Edit</a>
no_shipping	Shipping address. If set to "1," your customer will not be prompted for a shipping address. This is optional: if omitted or set to "0" your customer will be prompted to include a shipping address.		<a href="#">Edit</a>
notify_url	An internet URL of a script that can process the IPN.		<a href="#">Edit</a>
return	An internet URL where the user will be returned after completing the payment. For example, a URL on your site which hosts a "Thank you for shopping" page. This item is optional, if omitted, users will be taken to the PayPal site.		<a href="#">Edit</a>

Order number.

**Payment Method Name**

Name of the customer's payment method.

**Date**

Date of payment.

**Total Amount**

Total amount of payment.

**Tax Amount**

Tax amount of payment.

**Shipping Cost**

Shipping cost of payment.

**Bank Service Fee**

The cost of bank service (-s).

**Source Type**

Source type of payment.

### 3.5 Delivery Menu

This menu item is used for the management of all deliveries in the eShop system and for the setup of different delivery types.

(Figure 63)

#### 3.5.1 “Delivery Types” page

Use this page to view, edit, add or delete Delivery Types in the eShop system.

(Figure 64)

### Delivery Types Table Columns

**Name**

Name of the delivery type.

**Main URL**

Hyperlink to URL responsible for delivery the order.

**Delivery Confirmation URL**

Hyperlink to URL for confirmation of delivery the order.

### Buttons

**New Delivery Type**

Press this button to open the **New Delivery Type** page.

**Edit**

Press the button in this column to edit current delivery type.

**Delete**

Press the button in this column to delete current delivery type.

### 3.5.1.1 “New Delivery Type” page

Use this page to enter new delivery type.

(Figure 65)

### New Delivery Type Table Columns

**Name**

Name for a new delivery type.

**Main URL**

Company responsible for order delivery.

**Delivery Confirmation URL**

Confirmation URL of company responsible for delivery.

**Update**

Press the button in this column to update current delivery type.

**Cancel**

Press the button in this column to cancel your input.

**Edit**

Press the button in this column to edit current delivery type.

**Delete**

Press the button in this column to delete current delivery type.

**Buttons**

**New Delivery Type**

Press this button to enter another new delivery type.

**Edit**

Press the button in this column to edit current delivery type.

**Delete**

Press the button in this column to delete current delivery type.

**3.5.2 “Delivery” page**

Use this page to view, edit, add or delete information about your order deliveries.

(Figure 66)

**Delivery Table Columns**

**Confirmation Number**

Confirmation number, if successful delivery.

**Delivery Type**

Delivery type.

**Date**

Delivery date.

**Actual Shipping Cost**

Delivery actual shipping cost.

**Order ID**

Order ID.

**Order Number**

Order number.

**Order Date**

Order date.

## Buttons

### New Delivery

Press this button to open the **New Delivery** page.

### Edit

Press the button in this column to edit current delivery.

### Delete

Press the button in this column to delete current delivery.

You have to press button **New delivery**. The screen should look like described in 3.5.2.1

### 3.5.2.1 “New Delivery” page

Use this page to enter information about new deliveries.

ID	Order#	Date	Items Total	Charges Total	Shipping Total	Total	Order Status	Payed Amount	Order Items	Delivered Items

### Drop-down lists

**Show only**

Allows for selection of which products are to be shown (e.g. Posted only, Non-posted only or All products)

### 3.9 Database Function menu

This menu does not have any menu items. It allows importing of data from an external data file to your Products List very quickly. The Import process will require two simple steps. See the Import screens below (Step 1 and Step 2).

(Figure 88)

### 3.9.1 “Import Products List” page (step 1)

#### Database Function Controls (Step 1)

##### Data Source File (Field)

Enter the full path and filename of the external products list file to be imported.

##### Browse (Button)

Press this button to browse and select the file where the products list is stored. When the file is located and selected, the full path and filename to the external products list file will be stored in the **Data Source File** field.

##### Selected Import File Format (Switch)

This switch consists of three choices:

- Comma Separated File
- Tab Separated File
- Semicolon Separated File

Select appropriate separator type according to your external data file format.

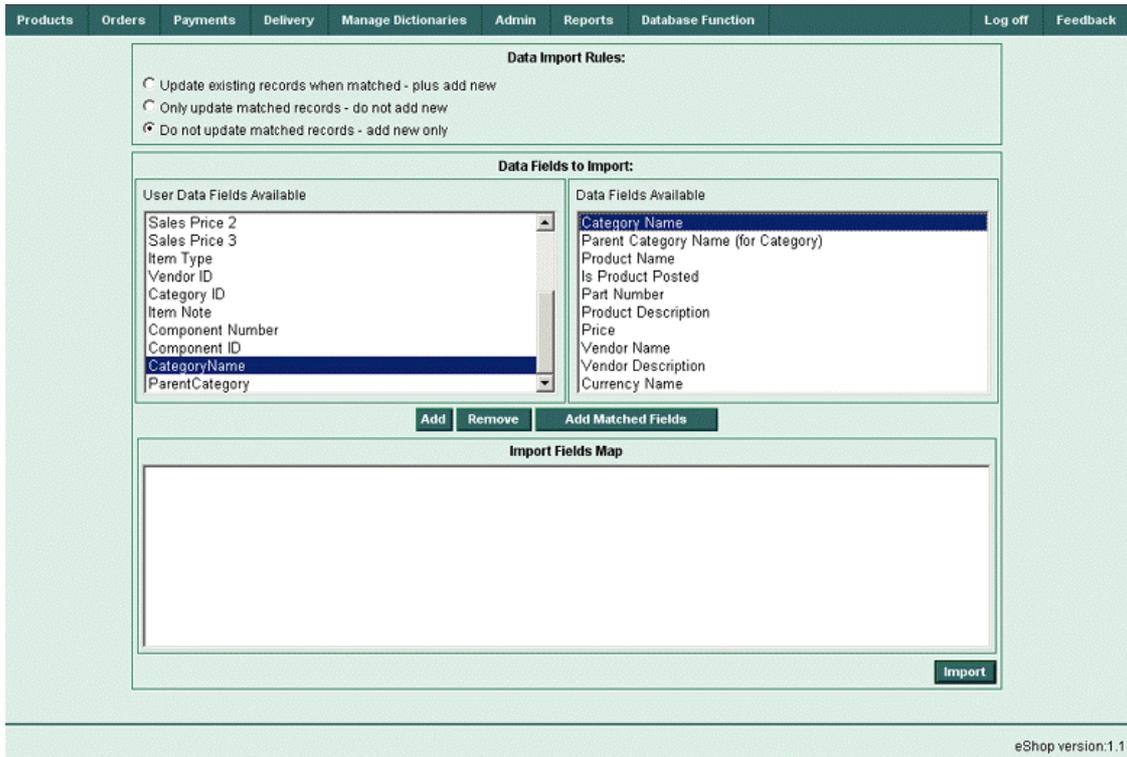

##### Field Headers (Check Box)

Check this box if your external file contains field headers in first data row.

##### Send (Button)

Press this button when all necessary preparations have been made (Data Source File prepared, Import File Format selected, Field Headers type selected). The selected data file will be sent to the eShop system for future actions.

After pressing the **Send** button the next screen (Step 2) will appear:

(Figure 89)

### 3.9.2 “Import Products List” page (step 2)

#### Database Function Controls (step 2)

##### Data Import Rules (Switch)

This switch consists of three choices:

- Update existing records when matched - plus add new
- Only update matched records - do not add new
- Do not update matched records - add new only

Select the appropriate import rule according to your needs.

##### Data Fields to Import (Two-windows Selector)

This control group consists of two windows. The left window displays the **User Data Fields Available** (this field set was imported from the first line of your external data file, if the appropriate setting was made), and the right window shows the **Data Fields Available** (this field set is available for update in the eShop system database).

##### Add (Button)

Select two matching fields: first, one in the left window, and then secondly one in right window, and then press this

button to put the selected match to the bottom (or lower) **Import Fields Map** window (result window).

**Remove (Button)**

Select any match in the bottom "**Import Fields Map**" window and press this button to remove selected match from this result window.

**Add Matched Fields (Button)**

Press this button if you have prepared your external file according to the eShop system requirements. This button will find matched fields (e.g. having exact names) in the left and right windows and add them automatically to bottom **Import Fields Map** window (result window).

**Import (Button)**

When all your selections are complete, press this button to finish the data import process.

As many matches as is required can be selected. Remember, that it's necessary to make matches between fields with similar data types. Remember that the **Product Name** field in the right window is a mandatory field and must be matched to any field in left window. If this rule is not followed the following error message will be displayed:

(Figure 90)

After making a variety of matches the screen will look similar to this:

Products	Orders	Payments	Delivery	Manage Dictionaries	Admin	Reports	Database Function	Log off	Feedback
----------	--------	----------	----------	---------------------	-------	---------	-------------------	---------	----------

**Data Import Rules:**

Update existing records when matched - plus add new  
 Only update matched records - do not add new  
 Do not update matched records - add new only

---

**Data Fields to Import:**

<p>User Data Fields Available</p> <ul style="list-style-type: none"> <li>Sales Price 2</li> <li>Sales Price 3</li> <li>Item Type</li> <li>Vendor ID</li> <li>Category ID</li> <li>Item Note</li> <li>Component Number</li> <li>Component ID</li> <li>CategoryName</li> <li>ParentCategory</li> </ul>	<p>Data Fields Available</p> <ul style="list-style-type: none"> <li>Category Name</li> <li>Parent Category Name (for Category)</li> <li>Product Name</li> <li>Is Product Posted</li> <li>Part Number</li> <li>Product Description</li> <li>Price</li> <li>Vendor Name</li> <li>Vendor Description</li> <li>Currency Name</li> </ul>

(Figure 92)

If any import errors occur during the import process, the following error messages:

- Incorrect file format, or
- Failed to enable constraints. One or more rows contain values violating non-null, unique, or foreign-key constraints.

In this event, the screen will return back to the import screen to change the import rules in an effort to correct the error. In this event, the page will look like this:

Products Orders Payments Delivery Manage Dictionaries Admin Reports Database Function Log off Feedback

Incorrect file format

**Data Import Rules:**

Update existing records when matched - plus add new

Only update matched records - do not add new

Do not update matched records - add new only

**Data Fields to Import:**

User Data Fields Available

Data Fields Available

Add Remove Add Matched Fields

**Import Fields Map**

Import

(Figure 93)

To correct any errors go to beginning of Step 2 and change the import rules or check your data type matches. If you are unsuccessful in importing the data, please contact the eShop team for immediate support.

### 3.10 Log off

This menu item will log you off the eShop system.

### 3.11 Feedback

This menu enables user to create and send messages to the eShop developers and help improve the overall system. It will also help users to obtain qualified answers to your questions on a 24/7 basis. If you have any questions, requests or suggestions on how we can improve our service we encourage you to submit them below. Please include your email address if you would like a direct response or reply.

#### **Fields and Buttons:**

##### **Issue type:**

Enter your issue type.

##### **Your name:**

Enter your name here

##### **E-mail address:**

Enter your E-mail address here

**Subject: \***

Enter your subject here

**Message Text: \***

Enter your message text. You do not need to press "Enter" or "Return" at the end of each line. A blank line may be used to separate paragraphs if necessary.

**File Attachment Size**

Attach any additional files if required.

**Reset**

Press this button to cancel this message.

**Save**

Press this button to send message to our staff!

The screenshot shows a web browser window with the address bar displaying "http://w3spt.fossoftware.com - WWW Support - all internet tools: Bug Tracking, Forums, News, Kn - M...". The page title is "Create New Message". Below the title, there is a message: "If you have any questions, requests or suggestions on how we can improve our service we encourage you to submit them below. Please include your email address if you would like a direct response." The form consists of several sections: "Issue type:" with a dropdown menu set to "Suggestion"; "Your name:" with an empty text input field; "E-mail address:" with an empty text input field; "Subject: ^" with an empty text input field; "Message text: ^" with a rich text editor containing the instruction "You do not need to press 'Enter' at the end of each line. Empty line may be used to separate paragraphs." and a toolbar with icons for copy, paste, undo, redo, bold, italic, underline, text color, background color, bulleted list, numbered list, indent, outdent, link, and unlink. Below the toolbar are dropdown menus for "Paragraph", "Font", and "Size", and a checkbox for "View HTML source". "Files attachment (max size 1.5Mb for each)" section has three empty text input fields, each followed by a "Browse..." button. At the bottom, there is a "Reset" button and a "Save" button, with the text "Press the button 'Save' when finished:" between them. A small note says "\* - required field". The footer of the page reads "powered by WWW Support".

(Figure 94)

### 3.12 Calendar Form

The Calendar form has been especially designed for entry of date-formatted fields into the eShop system. You may input dates manually or by clicking a corresponding **Select Date** reference:

123133123432
3/30/2006 <a href="#">Select Date</a>
Active
Active Orders
US\$
56.00
0.00
0.00
56.00

(Figure 95)

The screenshot shows a web browser window with the address bar containing "http://www.w3spt.co...". The main content is a calendar for March 2006. The calendar grid shows days from Sunday to Saturday. The date 3/30/2006 is highlighted in blue. Below the calendar, it says "Selected Date: 3/30/2006". There are "OK" and "Cancel" buttons at the bottom.

(Figure 96)

## 4. Support

Additional information about our product and ways for getting our technical support can be found on the product website at <http://www.w3spt.com/eshop>. Technical support of the system is carried out in a 24/7 basis. You have the opportunity to ask our experts any questions on any subject regarding the eShop system, usage of the system and how eShop can help optimize and grow your business.
